

GlobeNet is Recognized for its Carrier of Carrier Services with Frost & Sullivan's Company of the Year Award

With an intuitive long-term strategy and an existing highly reliable 23,500 km submarine cable network, GlobeNet delivers exceptional wholesale carrier-grade infrastructure across Latin America. In 2017, the company demonstrated a commitment to addressing unmet needs with vision—opening a top-of-the-line data center in Barranquilla, Colombia and partnering with NIC.br to implement a crucial new Internet exchange point in Fortaleza, Brazil. Moreover, announcing a forthcoming 2,500 km cable to Buenos Aires, Argentina, GlobeNet will build the first new route to the South Cone of America since 2001. With an increasing portfolio of network, IP and IaaS solutions, the company is focused on helping its customers lower operating and capital expenditures while enabling scalable expansion.

“Scarce among carrier services providers in Latin America, GlobeNet’s deep experience with large and complex network infrastructure cables translates into highly reliable and low latency routes reaching critical points. With an expanding portfolio of network, IP and IaaS solutions, the company is focused on helping its customers lower operating and capital expenditures while enabling scalable expansion.”
